# Functionality

- Upon opening the app, users are prompted to enter their name and select their preferred background color.
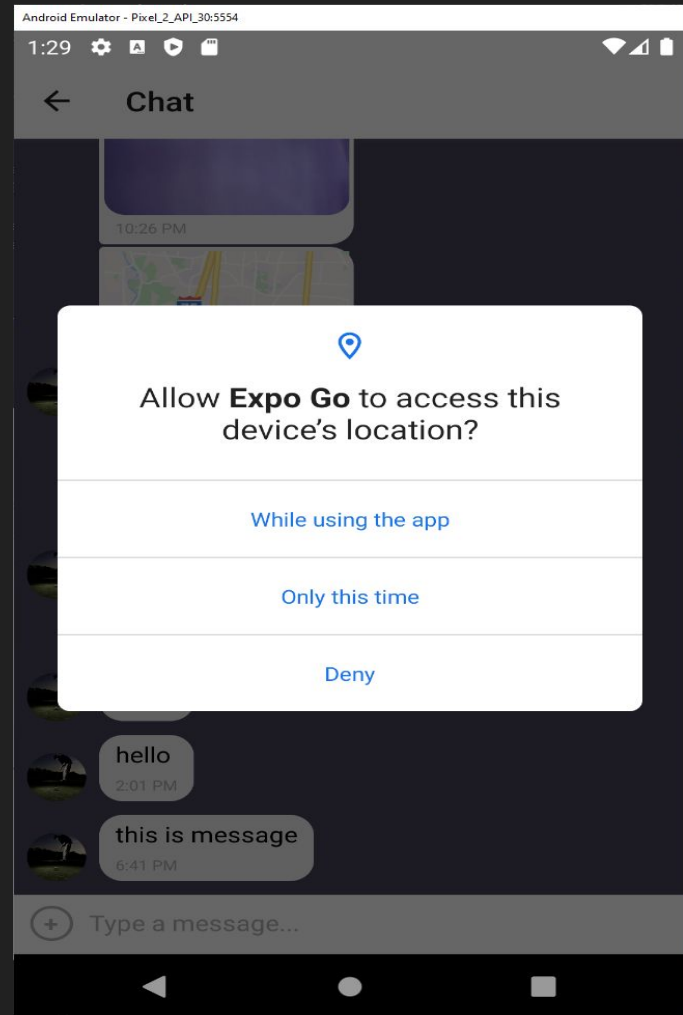

- Users will then be taken to the chat screen where they can send simple text messages

- Users can also open a menu for more options such as sending a picture from their gallery, taking a picture, or sending their location data.

- For each option, users will be prompted to give permissions.

- All messages, photos, and location data are sent to the chat and stored in a Firebase Firestore.
